

HÜPPE Solva pure

1 for all ...

„Ultimately my people have to install the system. The simpler it is, the better.“

Max (43), Installer

„Anyone planning to use their shower enclosure in old age should have barrier-free entry.“

Hergen (68), Pensioner

„Design, layout - it makes no difference. The shower enclosure should fit in harmoniously. And fit the budget.“

Vanessa (37), Architect

„It needs to look good, but above all without being intrusive.“

Marianne (58), Teacher

All for **1** for all

The smart HÜPPE Solva pure shower enclosure.

What must the perfect shower enclosure be like? This is what we asked the people we wanted to impress with our solutions - retailers, architects, building contractors, owners, installers, consumers.

We have noted and implemented their requests in 1 system that combines everything a modern shower enclosure should offer.

Our answer to every request:

HÜPPE Solva pure.

Entering the shower is sheer

CONVE

NIENCE

designed with numerous sophisticated features

Barrier-free entry.

All HÜPPE Solva pure models can be installed with full ease of access. Alternatively we also offer a discreet drip deflector strip for increased water-tightness.

Heightened convenience.

The integrated HÜPPE Solva pure rise & fall mechanism lifts the door slightly on opening - and softly lowers it again on closing. An innovation that you feel but do not see, because the technology is hidden from sight behind a discreet cover.

Ventilated this way or that.

The door of the HÜPPE Solva pure can be opened inwards and outwards. It can even be left open inwards after showering. Ideal for saving space around the shower in small bathrooms and perfect for ventilating the shower area. This significantly reduces mould formation in the joints.

frameless

The usage options are **HIGHLY**

ADAPTABLE

for integrating into any layout

Making a small space large.

A folding swing door that can be folded flat against the wall is also part of the HÜPPE Solva pure range. This creates additional space in even the smallest bathroom. And the shower can still be really big.

Frameless, borderless.

With a sloping layout or an angular bathroom - the frameless design of the HÜPPE Solva pure will fit the space. Even if a plinth or a sloped ceiling is making the shower area something of a challenge, with our wide range of slopes and cut-outs almost any bathroom design can be completed.

Uneven surfaces? Unimportant.

Uneven walls in the bathroom are no rarity in old buildings. Luckily there are suitable wall profiles for the HÜPPE Solva pure partially-framed designs. Not only do they level off structural unevenness - they also create stability and water-tightness.

Folding swing door folded against the wall

Cleaning shower panels has never been so

SIMPLE

and confident designs

With no corners or edges.

What would be regarded as a weakness elsewhere is a real strength with the HÜPPE Solva pure. There are no corners or edges in the frameless models to get in the way of fast cleaning. The hinges inside are flush with the panel, meaning that the shower enclosures can be easily cleaned using a conventional shower squeegee.

Anti-Plaque to stop limescale trouble.

On request the Solva pure can be coated with the HÜPPE Anti-Plaque surface finish. This enables the water to pearl off the glass easily, essentially preventing the build-up of dirt and limescale on the glass.

Out of sight, out of mind.

Nobody wants to see the screws and covers on side panels and fixed segments. Which is why they are screwed in and attached to the wall invisibly in the HÜPPE Solva pure. This is achieved using the HÜPPE sealing system, saving a lot of time during cleaning.

Thoroughly thought through.

With the HÜPPE SoftSeal technology, the hinges of the Solva pure are firmly attached to the panel via a two-component material. One component attaches the panel, the other fits around the semi-circular panel cut-out like a rubber seal. For optimum water-tightness.

HÜPPE SoftSeal technology provides firm attachment

Our shower enclosure is highly

ROBUST

thanks to quality Made in Germany

Tested under the harshest conditions.

Anything intended to enhance the appearance of the Solva pure as a hinge must pass tough tests - the moving parts are moved at least 30,000 times in the HÜPPE laboratories. Technically, two functions ensure an extremely long service life: the SoftSeal technology, produced by way of a solid connection between the hinge and the panel; and the integrated rise/fall mechanism that significantly reduces wear on the drip deflectors.

Confidently guaranteed for 30 years.

We are so confident of the quality of the HÜPPE Solva pure that private customers receive a 30-year guarantee. This guarantee applies to any material and/or processing failures during private household use of the shower enclosure. The precise terms of the guarantee are specified on purchase or can be requested directly from HÜPPE.

The period of the guarantee starts on registration of the HÜPPE Solva pure within 180 days of the purchase date, online at www.hueppe-solva-pure.com. To register the guarantee, the customer requires the invoice/proof of purchase and the identity number, which is stuck to the shower enclosure or is in the product passport delivered with it.

HÜPPE Solva pure

The design of the system is simple and

STY

LISH

and easy to install

Reservedly timeless.

The HÜPPE Solva pure is not aiming to take the spotlight as a shower enclosure. Quite the opposite - the design from renowned designer duo NOA Intelligent Design is based on a reserved style. Timeless elegance that suits any bathroom set-up. An approach that brings out the best in hotels and homes with their own style.

Firmly installed.

The HÜPPE Solva pure is delivered pre-assembled as far as possible. Installation of the few remaining loose parts is quick and precise thanks to assembly blocks and the HÜPPE Autoblock. These are used to hold the hinges in place, so the doors cannot move during assembly. The small assembly blocks can then be used as handy towel hooks. Installers benefit from efficient, frustration-free installation - and greater calculation certainty.
